SUNBEAM INSTITUTE OF TECHNOLOGY PVT LTD HINJEWADI, PUNE-411057

ADV JAVA MOCK TEST SEPT-2022 DAC

- 1. Which of the following is not true for servlet?
- **Answers**
- 1. It is persistent
- 2. Platform independent
- 3. It is multi threaded
- 4. It is single threaded.
- 2. Which method of the servlet is/are called several times in its life? Answers
- 1. init()
- 2. doPost()
- 3. destroy()
- 4. None of above
- 3. Which object is used to forward the request processing from one servlet to another?

Answers

- ServeltContext
- 2. ServletConfig
- RequestDispatcher
- 4. ResponseDispatcher
- 4. The method getWriter returns an object of type PrintWriter. This class has println methods to generate output. Which of these classes define the getWriter method?

Answers

- HttpServletRequest
- HttpServletResponse
- ServletConfig
- ServletContext
- 5. In which file database table configuration is stored?

- 1. .dbm
- 2. .hbm
- 3. .ora
- 4. .sql

6. How can we get context init parameter and run some code before rest of the application can service a client?

Answers

- ServletContextAttributeListener
- 2. ServletContextListener
- HttpSessionListener
- 4. All of these
- 7. Suppose you want to know each time request comes in, so that you can log it. Which listener is appropriate for that?

Answers

- ServletContextAttributeListener
- ServletContextListener
- HttpSessionListener
- 4. All of these
- 8. Suppose you want to know each time request comes in, so that you can log it. Which listener is appropriate for that?

Answers

- ServletRequestListener
- 2. ServletRequestAttributeListener
- ServletContextListener
- 4. HttpRequestListener
- 9. In which of these getAttibute() and setAttribute() method has defined?

Answers

- HttpSession
- ServletRequest
- ServletContext
- 4. All of these
- 10. Which of the following are the valid scopes in JSP?

- 1. request, page, context, application
- 2. response, page, session, application
- 3. request, page, session, global
- 4. request, page, session, application

- 11. Which of the following method can be used to used to instantiate a method? Answers
- static factory method
- default-init method
- destroy method
- 4. lazy-init method
- 12. What is the default scope of the beans?

- Prototype
- 2. session
- Request
- 4. Singleton
- 13. Which Standard tag is used store data in the JavaBeans instance? Answers
- 1. <jsp:useBean>
- 2. <jsp:setBean>
- 3. <jsp:set>
- 4. <jsp:setProperty>
- 14. Which driver converts JDBC calls directly into the vendor-specific database protocol?

Answers

- 1. Native-API driver
- 2. Network Protocol driver
- 3. Thin driver
- 4. None of the above
- 15. Which interface provides methods to execute queries with the database? Answers
- 1. Connection interface
- 2. Statement interface
- 3. ResultSet interface
- 4. None of the above
- 16. What are the method of Methods of PreparedStatement interface?

- 1. public void setInt()
- 2. public void setDouble()
- 3. public ResultSet executeQuery()
- 4. public void setFloat()

17. Which of the following are tags of hibernate.cfg.xml?

Answers

- 1. SQL variant to generate
- 2. DTD
- 3. JDBC connection
- 4. All of the options
- 18. In the elements of Hibernate architecture is a factory of session and client of ConnectionProvider, It holds the second level cache (optional) of data is _____.

Answers

- 1. Session
- 2. ConnectionProvider
- 3. Transaction
- 4. SessionFactory
- 19. What is dirty checking in Hibernate?

Answers

- 1. object state changes in order to synchronize the updated state with the database
- 2. remove the dirty data from database.
- 3. check the data when insert into database.
- 4. None
- 20. Which of the following element is used to represent one-to-one relationship in hibernate?

Answers

- many-to-one
- 2. many-one
- ManyToOne
- 4. None of the above
- 21. Which ways are used by the Log4j and Logback frameworks in hibernate framework to support logging?

- 1. By log4j.xml file
- 2. By log4j.properties
- 3. Both of above
- 4. None of the above

- 22. Which of these simplifies an Object Relational Mapping tool? Answers
- 1. Data creation
- 2. Data manipulation
- 3. Data access
- 4. All mentioned above
- 23. org.hibernate.SessionFactory can manage contextual sessions and allows to retrieve them by:-

- 1. getSession() method
- 2. getCurrent() method
- 3. getCurrentSession() method
- 4. None of the above
- 24. What is no mode of autowiring?

Answers

- 1. Autowiring by property name.
- 2. Similar to byType, but type applies to constructor arguments.
- 3. Default setting which means no autowiring and you should use explicit bean reference for wiring.
- 4. Spring first tries to wire using autowire by constructor, if it does not work, Spring tries to autowire by byType.
- 25. Which is not DI?

Answers

- 1. Setter Based DI
- 2. Auto-wiring DI
- 3. Both of the above
- 4. None of the above.
- 26. Which of the following is not a state of object in Hibernate?

- 1. Attached
- 2. Detached
- Persistent
- 4. Transient

- 27. Which is not application context?
 Answers
- ClassPathXmlApplicationContext
- 2. AnnotationApplicationContext
- WebApplicationContext
- 4. WebPathXmlApplicationContext
- 28. Which is Stereo Type Annotations?

- 1. @Autowired
- 2. @Controller
- 3. @PreDestroy
- 4. @Qualifier
- 29. What is Spring MVC framework?

Answers

- 1. Spring MVC framework is Model-Value-Class architecture and used to bind model data with values.
- 2. The Spring web MVC framework provides model-view-controller architecture and ready components that can be used to develop flexible and loosely coupled web applications.
- 3. Spring MVC framework is used for Transaction management for Web Applications.
- 4. Spring MVC framework is used for AOP for Web Applications.
- 30. How to handle shut down of IoC container?

Answers

- Using shutdownHook()
- Using shutdownHandler()
- Using registerHook()
- 4. Using registerShutdownHook()
- 31. What is @Controller annotation?

- 1. The @Controller annotation indicates that a particular class serves the role of a controller.
- 2. The @Controller annotation indicates how to control the transaction management.
- 3. The @Controller annotation indicates how to control the dependency injection.
- 4. The @Controller annotation indicates how to control the aspect programming.

- 32. Which of the following is correct about messaging in RESTful web services? Answers
- 1. A client sends a message in form of a HTTP Request and server responds in form of a HTTP Response.
- 2. These messages contain message data and metadata i.e. information about message itself.
- 3. Both of the above
- 4. None of the above.
- 33. Spring provides a factory that can export beans annotated with:Answers
- javax.jws.WebService
- javax.jws.WebServiceProvider
- 3. all of the mentioned
- 4. none of the mentioned
- 34. Factory to use our Spring bean as the implementation:Answers
- 1. jaxws:end
- 2. jaxws:endpoint
- 3. all of the mentioned
- 4. none of the mentioned
- 35. Isolation Levels Supported by Spring:-

- 1. DEFAULT
- 2. READ COMMITTED
- 3. READ UNCOMMITTED
- 4. All of the mentioned
- 36. Which of the following method can be used to used to instantiate a method? Answers
- static factory method
- 2. default-init method
- destroy method
- 4. lazy-init method
- 37. Which method is used to save or update the state of the given instance from the underlying database?

- 1. session.update()
- 2. session.keep()
- 3. session.saveOrUpdate()
- 4. session.Load()

38. What is bean in Spring?

Answers

- 1. A component
- 2. An Object
- 3. A class
- 4. A container
- 39. Spring's core transaction management abstraction is based on the interface

Answers

- 1. TransactionManager
- 2. PlatformTransactionManager
- 3. PlatformManager
- 4. PlatformTransaction
- 40. Element used to specify access attributes for bean's methods.

- security:spring
- 2. security:intercept-security
- 3. security:intercept
- 4. security:protect
