✓ **What is byName mode of autowiring?** * 1/1

○ A - Default setting which means no autowiring and you should use explicit bean reference for wiring.

⦿ B - Autowiring by property name. Spring tries to match and wire its properties with the beans defined by the same names in the configuration file. ✓

○ C - Spring first tries to wire using autowire by constructor, if it does not work, Spring tries to autowire by byType.

○ D - Similar to byType, but type applies to constructor arguments.

✗ What is constructor mode of autowiring? *   0/1

○ A - Autowiring by property name. Spring tries to match and wire its properties with the beans defined by the same names in the configuration file.

○ B - Spring first tries to wire using autowire by constructor, if it does not work, Spring tries to autowire by byType.

◉ C - Autowiring by property type. Spring tries to match and wire a property if its type matches with exactly one of the beans name in configuration file.   ✗
